

# Slip and slide

CONVENTIONAL WISDOM SAYS TILTING A TRUCK BODY SHOULD BE ENOUGH TO EMPTY IT, BUT DEPENDING ON THE LOAD, THAT ISN'T ALWAYS THE CASE. THAT'S WHY INDUSTRIAL PLASTICS EXPERT **E-PLAS** WILL ALWAYS RECOMMEND QUICKSILVER AS THE IDEAL FLOOR LINING SOLUTION.

When spec'ing a tipper, choosing a versatile and durable material is essential for a smooth unloading process – not only for the actual tray, but also for the floor lining inside. E-Plas' QuickSilver floor liner is a popular option in that regard.

According to E-Plas Director, Lisa Morgan Marshall, tipper operators are better off fitting QuickSilver the moment a unit is purchased to avoid blockages and counteract potential damage caused by the materials that are carted. "QuickSilver is a seamless floor liner that allows for every cargo to dump cleanly without any congestion and can handle any bulk load with ease," she explains.

Made from 'ultra-high molecular weight polyethylene', QuickSilver can even outwear steel and aluminium, she adds. "The material weighs less than both and is highly abrasion resistant. It's versatile and durable enough to handle all climates and working environments whether it's hot, humid, wet, dry or freezing – and it will eventually protect the integrity of the entire application."

Lisa credits the success of the QuickSilver lining to global plastics company Quadrant, which is responsible for making the

product available within the Australian market. "E-Plas is very proud to be the only authorised Australian distributor of QuickSilver," she says, adding that Quadrant can offer a four-year non-prorated manufacturer warranty on the product.

The QuickSilver is smooth enough to

unload every inch of material when tipped, according to Lisa. "The body liner is a very slippery type of material that can eliminate a lot of carry backs, and there is literally no stickiness whatsoever," she says. "Our customers have said that having less carry backs enables them to increase their payload and achieve more deliveries daily." With outlets in every state, E-Plas has gained renown throughout Australia as a leading force in the supply of engineered and industrial plastics; and the team's advice in any plastic-related issue is much-valued throughout the trailer manufacturing industry.

In addition to the QuickSilver product, E-Plas has access to an extensive range of plastics from some of the world's largest and highly specialised manufacturers, including Quadrant EPP, Sustaplast KG, Guarniflon and Cattaneo.
