

E-PLAS QUICKSILVER

In the bulk transport industry, operators know that not every drop off results in all contents being removed from the tipping tray, but with E-Plas' Quicksilver floor lining solution, the potential long-term damage caused by materials can be greatly reduced.

"Quicksilver is a seamless floor liner that allows for every cargo to slide right off without any congestion; it can handle any bulk load with ease," says Chris Saffekas, E-Plas Supply Manager. "The body liner is made from a very slippery type of material that can eliminate a lot of carry backs, and there is literally no stickiness whatsoever." Made from ultra high molecular weight polyethylene (UHMW-PE), the Quicksilver can outlast steel and aluminium according to E-Plas. "The QuickSilver weighs less than both steel and aluminium and is highly abrasion resistant," Chris adds. "It's versatile and durable enough to handle all climates and working environments whether it's humid, wet, dry or freezing."

QuickSilver lining is the product of global plastics company, Quadrant, which can offer users a four-year non-prorated manufacturer warranty. E-Plas is the only authorised Australian distributor of the floor liner.
